SRF 425

Exhibit A -

"SRF 425" was developed by bulking seed from F<sub>4</sub> plants from the cross Wayne<sub>3</sub> x (Dorman<sub>5</sub> x PI181537).

Exhibit B -

Seed of SRF 425 are spherical. The seed coat is a shiny yellow and hilum color is black. The seed are rather small, containing about 3200 per lb. compared to 2500 for Wayne. Pod color is brown. The trifoliate leaves are lanceolate in shape, pubescence - tawny, and flowers are white. It is of Group IV maturity ripening about midway between Clark 63 and Kent - about the same as Cutler 71. Growth habit of SRF 425 is indeterminate. It branches well when grown in thin stands. A high percentage of the pods will bear 4 seeded pods, the percentage will vary with seeding rate, soil type, and season but in all cases it will be greater than Cutler 71 grown under the same conditions.

Exhibit D -

SRF 425 more closely resembles SRF 307B than any other previously released variety. However, it differs from SRF 307B in maturity, hilum color, and seed size. SRF 425 is about 10 days later, has black hilum (SRF 307B has brown hilum), and the seed size is smaller - 3200 per lb. compared to 2900 for SRF 307B. It most closely resembles SRF 350 which is a sister line to this variety and which is being released simultaneously with SRF 425. It differs from SRF 350 in maturity, height, and seed size. It is 6 days later, about 2 inches taller, and has about 300 fewer seeds per lb.

Exhibit E -

The Soybean Research Foundation is employer of the breeder, Dr. Arnold L. Matson, and is therefore the sole owner of the 'SRF 425' variety of soybean.
